Electricity

Electricity is needed so I can have lights in my house. If the electricity went out we would not be able to see and if your oven is electrical you can't use it to cook food. That will also mean that our food supply that we keep in our refrigerator will go bad. I won't not survive we out electricity was not discovered we not have electricity we not have video games the will miss video games if electricity.

If we did not have electricity we wouldn't enchiladas my favor food and other people. I wouldn't be able to walk in the kitchen and smell that cheese smell and that spice smell.I wouldn't have toast to we not able to eat that crunchy feeling in your mouth. We wouldn't have grilled cheese that crunchy feel and that cheese toast and buttery smell.

Refrigerator we all need them because we need somewhere to but are left over food for later. We need somewhere to but that amazing ice cream. Where are we Supposed to put that cheesy leftover pizza but if we didn't have refrigerator the cheesy goodness will go away then we have to thought it away.

3 reason why electricity is important you need entertainment like video games, TV , Youtube. We wouldn't have all that so we would be so bored. We wouldn't have video games at are house to play after a long day at school. If you don't have video games you can watch tv for long until there not tv show you like. If I did not that I well get my computer and get on youtube and watch youtube. There is a problem there will no wifi.... Nooooooooooooooooooooooo!

So that is why I think electricity is in important. So what do you think is electricity important to you yes or no. Don't get mad at me this inventions in my opinion no one else. Be side you need electricity to get the world not destroy and we can get to school and have food and education.
